

Security & data *FAQ*

Connecting Backstory to Claude doesn't change who can see your data. Here's what moves, who can access it, and how Backstory protects it under SOC 2 Type 2 and ISO 27001 controls.

01 · WHAT MOVES

Each answer uses only the data it needs, and only you see it

WHAT LEAVES

Records that answer the question

Account, deal and activity details Backstory returns when a signed-in user asks.

WHERE IT GOES

That user's Claude conversation

Claude uses it to write the answer. Nothing is sent when no one asks.

WHO CAN SEE IT

The user who asked

And anyone they choose to share that conversation with.

02 · ACCESS

Permissions mirror the user's Backstory access.

No one gets extra visibility.

Each person signs in with their own Backstory login. If a rep can't see a deal in Backstory, Claude can't see it for them either.

CLAUDE CAN SEE

- ✓ What the user can already see in Backstory
- ✓ Only what's returned for the question asked

CLAUDE CANNOT SEE

- ✗ Records outside that user's Backstory access
- ✗ Anything for users who aren't enabled

COMMON QUESTIONS

Does turning this on open all our Backstory data to Claude?

No. Claude only reaches what each signed-in user can see, one question at a time.

Can a manager see a rep's questions?

Conversations belong to the person who had them. What a manager can see in Backstory itself doesn't change.

Can we control who has it?

Yes. Admins decide who it's enabled for. People outside that group won't see Backstory in Claude.

Does Claude write back to Backstory or the CRM?

Confirm with your Backstory team which actions are enabled for your workspace.

03 · RETENTION AND TRAINING

Governed by each company's published policies. Read them at the source.

FOR YOUR CHAMPION

- 01 Confirm who's enabled for rollout
- 02 Share "The first 15 minutes" with those users
- 03 Send data questions back to this page

Better prompts, *better answers*

Three patterns to know before rollout. Each has a simple fix your users can apply in the next prompt.

01 · WHAT HAPPENS

Claude skips the tool

It answers from general knowledge instead of your Backstory data.

INSTEAD OF "How's the deal going?"

FIX

Say "use Backstory" or name the account explicitly.

TRY

"Using Backstory, how's Halden Freight going?"

02 · WHAT HAPPENS

Broad asks fall apart

"Summarize my whole pipeline" hits output limits or gets shallow.

INSTEAD OF "Summarize my whole pipeline."

FIX

Scope by segment, stage or time window.

TRY

"Using Backstory, summarize my late-stage deals closing this quarter."

03 · WHAT HAPPENS

A short answer can mean activity wasn't captured

If meetings weren't captured, Claude reports what exists.

INSTEAD OF Taking a short answer at face value

FIX

Drill into the Backstory data behind the answer to see what was captured.

TRY

"Using Backstory, what meetings have we had with Halden Freight this quarter?"

RULE OF THUMB

Name the tool. Scope the ask. *Follow the sources.*

"Using Backstory, what changed on Halden Freight in the last 30 days?"

→ Sources: 3 meetings, 5 emails

01

Name the tool

Claude calls Backstory, not guesswork.

02

Scope the ask

An account and time window.

03

Follow the sources

Drill into the data behind it.

IN PLAIN TERMS

SOC 2 Type 2: an independent audit confirms security controls work over time. **ISO 27001:** the global standard for managing information security.
