The tools you didn't *know you had*

The most valuable capabilities are the ones nobody thinks to try. Here are the tools behind Backstory MCP, and what they do next to the rest of your GTM stack.

Every answer is a chain of tool calls

You ask one question. Claude picks from Backstory's 17 MCP tools, decides the order, and combines what they return into one answer.

DID YOU KNOW?

Three power moves

Combine tools, save your context, and make the answer the deliverable.

Three moves most teams never try

01

Stack connectors

Backstory plus Calendar plus Gmail in one prompt. Each connector adds a piece of the picture.

TRY

“Prep me for tomorrow’s meetings using Backstory history and the latest email thread.”

02

Standing instructions

A Claude Project that checks Backstory every time, so users stop re-explaining context.

TRY

“For every account question, check Backstory first and cite the meetings you used.”

03

Output as the deliverable

Turn an account summary directly into a doc or a formatted brief for the exec sponsor.

TRY

“Turn this into a one-page brief for Halden Freight’s exec sponsor.”

Say this, and Backstory reaches for...

“Catch me up on...”

`get_recent_account_activity · get_engaged_people`

“Is this deal at risk?”

`get_opportunity_status · ask_sales_ai_about_opportunity`

“Which deals need attention?”

`top_records · get_opportunity_status`

“Have we seen this before?”

`situation_search`

“What’s new with them?”

`account_company_news`

“How’s the account plan?”

`get_scorecard · get_account_status`

Claude picks the tools. Starting with “Using Backstory” and naming the account helps it pick well.
