

MCP in *plain English*

MCP is one of the most common words thrown around in GTM right now. Yet, it is rarely explained in simple terms. This is the starting point: understand it first, then trust it, use it and stretch it.

1 What it is

MCP (Model Context Protocol) is a standard that lets AI clients like Claude or ChatGPT connect to tools and use them without every integration being built from scratch.

2 How it works Four parts, one question.

← The answer comes back to you, grounded in Backstory data, inside the AI client you already use.

DID YOU KNOW? An AI client can only use the tools an MCP server chooses to expose. It sees what it has been given, not everything in the system.

3 Why a standard matters Build once, use everywhere.

THE TAKEAWAY FOR GTM TEAMS

Context where you work

Ask about an account and get answers from Backstory, without switching tabs.

Connect once

One server works across the AI clients your team already uses.

Answers stay grounded

The AI reads the emails, meetings and CRM activity Backstory captures.

4
START HERE

Ask it like *this*

These questions are where Backstory MCP pays off. Pick one for your role, swap in a real account and ask it in your AI client.

ACCOUNT EXECUTIVES

“What should I focus on this week?”

Reviews your pipeline, flags at-risk deals and suggests priorities.

CUSTOMER SUCCESS

“Which accounts need attention?”

Reads engagement patterns and flags accounts showing risk.

SALES MANAGERS

“How is my team tracking this quarter?”

Surfaces coaching opportunities across the team.

“Help me prep for my call with Halden Freight.”

Summarizes recent activity, key contacts and talking points.

“Summarize the last month with Corvia Health.”

Gives a full activity overview in one answer.

“Which deals are most likely to close this month?”

Weights opportunities by activity and engagement.

TIP Name the account and a time window for the sharpest answers.

5
Example: Situation search
One question, past deals as precedent.

WHAT IT DOES

Finds historically comparable past deals to use as precedent for a live one.

WHERE TO FIND IT

MCP only. Not exposed anywhere else in Backstory.

STATUS

In pilot. Available to pilot customers now and still being tuned for the right level of granularity.

WHY IT MATTERS FOR GTM

Reps stop guessing how a deal like theirs was won. Managers can coach from precedent instead of memory.

Find a similar deal to this one and tell me: how we were able to land the customer, and what I should avoid as I navigate this sales cycle: <crm.example.com/opportunity/006...>

Loaded tools, used Backstory MCP integration >

I pulled up the current opportunity and ran it against similar historical deals. The closest match is a comparable net-new pilot, and I've pulled patterns across four similar wins to round out what to avoid.

Closest match: a net-new pilot at a mid-market software company

Nearly identical situation: a paid pilot, a buyer waiting on internal review, and a deal that needed rework on commercial structure.

How it was landed

- Separated subscription pricing from services pricing, which cleared up buyer confusion
- Ran a technical alignment session so stakeholders had what they needed for sign-off
- Sent the order form the moment approvals cleared

Outcome: Signed and moved straight into implementation.

6 What it means for your team

Your AI becomes an expert on *your* business

BEFORE MCP

- ✗ Copy account data out of Backstory, paste it into a chat, get generic advice
- ✗ Ask vague questions with no context behind them
- ✗ Switch between tools all day
- ✗ Analyze and report on data by hand

WITH MCP

- Your AI already knows your accounts, deals and history
- Ask specific questions: "What are the risks on the Halden Freight deal?"
- Get insights based on your actual data, not generic best practices
- Work faster without leaving your AI client

7 Why it works What happens behind each answer.

One standard, any client

Backstory exposes one server. You connect whichever AI client your team already lives in.

Live data, real permissions

The AI sees accounts, deals and customer interactions in real time, through the signed-in user's own Backstory permissions.

No copy, paste and hope

Instead of pasting a summary into a chat and hoping it's current, the AI reads the record itself.

8 Good to know

WHAT IT DOESN'T DO

- ✗ Replace human judgment or relationships
- ✗ Take actions in your CRM on its own
- ✗ Work well if Backstory data isn't up to date
- ✗ Replace a good sales process

QUICK ANSWERS

Do we need to change how we work?

No. Keep using Backstory as you do today. MCP gives your AI tools access to that data.

What does it cost?

MCP is included with your Backstory subscription. The AI tools themselves may have their own cost.

WORKS WITH

- Claude Desktop
- Microsoft Copilot
- Cursor
- Goose
- n8n
- ChatGPT
- Gemini

9 Getting started

Take stock

Which AI tools does your team already use?

Pick use cases

Which prompts above would save the most time?

Connect

Work with Backstory to set up MCP.

Train

Show your team how to ask better questions.

Measure

Track time saved and answer quality.
