

Use AI like *your name is on it*

AI amplifies good judgment and poor judgment alike. These habits keep customer trust intact.

01 Five principles

The habits that keep customer trust intact when AI helps with the work.

01

Be open

Say when AI shaped the work, and be honest about its limits.

"I used AI to analyze this, and here's what the pattern suggests."

02

Protect data

Customer data goes only into approved, enterprise AI tools.

Backstory through your company's AI tool, never a personal account.

03

Check the work

Verify facts, figures and claims before you act or share.

"Let me confirm these numbers before they go in the proposal."

04

Stay fair

Watch for assumptions based on names, locations or company type.

Prioritize on activity and evidence, not stereotypes.

05

Own it

If it goes out under your name, it's your work.

Could you explain and defend it without the AI?

02 Where data can go

Match the data to the tool. Your company's data policy always wins.

FINE ANYWHERE

Public and general information

- Industry trends and market data
- Public company information

APPROVED TOOLS ONLY

Company and customer data

- Account and deal context, via Backstory in your approved AI tool
- Customer emails, with sensitive details removed

NEVER IN PUBLIC AI

Anything confidential

- Contracts and agreements
- Proprietary pricing and personal contact details

WHY MCP HELPS

No more pasting customer data into chats.

YOUR ACTIVITY

Email, meetings, CRM

Captured by Backstory

BACKSTORY

Filters and summarizes

Sensitive content filtered out

APPROVED AI TOOL

Your company's Claude

Each person sees what their Backstory user sees

YOU

Review and send

You're the last check

⊗ Never copy customer data into a personal AI account.

03 Across the sales cycle

Where AI helps in each motion, where a person should stay in charge, and when to say AI helped.

DO AND DON'T, BY MOTION

	DO	DON'T
Prospecting	Personalize outreach with Backstory signals	Send AI-written emails without editing them
Demos	Tailor the flow and prep objection answers	Promise capabilities or ROI you haven't verified
Proposals	Draft structure and executive summaries	Use AI legal terms without legal review
Customer success	Spot usage patterns and renewal risk	Automate sensitive messages or escalation calls

WHEN TO SAY AI HELPED

Always
AI substantially wrote it, it's a formal proposal, or accuracy could be questioned.

Consider it
Sharing AI analysis or insights with a customer or colleague.

Keep a human in the loop
You review what AI produces before anyone else sees it. Say so when you share it:
"I used AI to help research this, and I've verified the key points."

04 Before it goes out

A last check on every message, and what to do if a mistake gets through.

BEFORE YOU HIT SEND

☐ Proofread names, numbers, owners and dates

☐ Backstory filters sensitive content. Keep what you add yourself to approved tools

☐ Sounds like you, written for the correct audience

☐ Every figure names its window, like "last 30 days"

☐ You'd stand behind it without the AI

IF SOMETHING GOES WRONG

01

Stop

Pull the output

02

Assess

Who saw it?

03

Tell

Inform people

04

Correct

Send the fix

05

Log it

Improve process

General guidance. Follow company protocols first.
