

The case for AI that *knows your deals*

Why GTM teams are connecting their AI tools to Backstory, and what it changes for reps, managers and revenue leaders.

THE SHIFT

Most GTM teams already use AI. Three gaps keep it from knowing your deals.

01

Context is scattered

Deal context lives across CRM, email, calendars and call notes. Reps rebuild the story by hand before every conversation.

02

AI without context is generic

A general AI tool gives general advice. Pasting in notes helps for one chat, then the data goes stale.

03

Waiting has a cost

Teams that connect AI to their own data now build the habits first. Every quarter without it is more prep done by hand.

WHAT CHANGES

AI stops being another tab. It becomes the layer that *reads your stack*.

Backstory MCP connects your AI tool to the accounts, deals and conversations Backstory captures. Ask in plain English and get answers from Backstory's summaries of your own activity in seconds, not an hour.

Faster decisions

Answers in seconds instead of an hour of tab-hopping.

Grounded in your data

Built from summaries of captured meetings, emails and CRM activity.

No context switching

Works inside the AI tool your team already uses.

Your permissions

Each person sees what their Backstory user sees.

Help me prep for my call with Halden Freight.

Used Backstory >

Halden Freight · Fleet Expansion · \$240K · Closes Nov 14

LATEST

Dana Ruiz (VP Operations) asked for revised pricing on Friday.

RISK

Marcus Lee (CFO) hasn't joined a meeting in 26 days.

DO NEXT

Send revised pricing and ask Dana to bring Marcus on Thursday.

DID YOU KNOW?

MCP is an open standard. One Backstory connection works across AI clients, so switching AI tools later doesn't mean starting over.

BEFORE YOU INVEST

Eight questions every GTM leader *should ask*

Backstory MCP doesn't ask you to pick a new AI tool. It makes the ones your team already uses smarter. Here are straight answers, and a way to check each one yourself.

01 Is it worth the investment?

MCP is included with your Backstory subscription. Usage and token limits in Claude or other AI tools work as they normally do, under your plan with that provider.

CHECK Pilot it with one team and track hours saved on prep and reporting.

03 Can we trust the answers?

Answers come from Backstory's summaries of captured meetings, emails and CRM activity, so you can ask what any answer is based on. If something looks off, work with your CSM.

CHECK Ask "What dates and people is that based on?"

05 Will it fit our stack?

One Backstory connection works across Claude, Copilot and other AI tools. It runs alongside connectors like Calendar and email.

CHECK List the AI clients your teams use today.

07 Will it be outdated next year?

MCP is an open standard with broad industry support, so you aren't betting on a single AI tool.

CHECK Keep the connection when you switch clients.

02 Is our data safe?

Each person sees what their Backstory user sees. That follows Backstory's visibility settings, which can differ from Salesforce sharing. Backstory is SOC 2 Type 2 and ISO 27001 certified.

CHECK [Trust & security](#) · [Help Center privacy resources](#)

04 Will reps actually use it?

Backstory works inside AI tools like Claude, so reps ask in plain English where they already work. There's no new dashboard to learn.

CHECK Run The First 15 Minutes with a pilot group.

06 Is our data good enough?

It works with what Backstory captures now. Thin answers point to capture gaps you can fix.

CHECK Start with accounts that have recent meetings.

08 Will it replace our people?

It removes the hunting, not the judgment. Reps spend more time with customers and less time in tabs.

CHECK Watch where reclaimed prep time goes.

IS YOUR TEAM A FIT?

- ☐ Your team uses an AI tool such as Claude, ChatGPT or Copilot. Supported clients keep expanding.
- ☐ Reps and CSMs have email and calendar connected to Backstory
- ☐ You're scaling and need more from each person
- ☐ You have an AI-curious leader or rep to champion it

WHO TO BRING IN

Sponsor	VP Sales, VP Customer Success or Sales Ops
Technical	IT Security and your sales systems admin. Share Backstory for IT .
Champion	An AI-forward manager or rep

START SMALL, PROVE IT FAST

Rollout timing varies with team size and complexity

01

Pick one team

A group with active deals and a champion.

02

Teach the three kinds of questions

One account or deal, a list, and Backstory's assistant.

03

Run it for 30 days

Use it in real prep, not a sandbox.

04

Measure

Prep time saved, answer quality and weekly use.
