

Security & data *FAQ*

Connecting Backstory to Claude doesn’t change who can see your data. Here’s what moves, who can access it, and how Backstory protects it under SOC 2 Type 2 and ISO 27001 controls.

01
What moves

02
Who can see it

03
How it’s protected

04
Common questions

05
Better answers

01 Each answer uses only the data it needs, and only you see it

Backstory doesn’t sync your data into Claude. When someone asks a question, Backstory sends back summaries that answer it.

02 Each person sees what their *Backstory user sees*.

Each person signs in with their own Backstory login. That follows Backstory’s visibility settings, which can differ from Salesforce sharing. If a rep can’t see a deal in Backstory, Claude can’t see it for them either.

CLAUDE CAN SEE

- ✓ What the user can already see in Backstory
- ✓ Only what’s returned for the question asked

CLAUDE CANNOT SEE

- ✗ Records outside that user’s Backstory access
- ✗ Anything for users who aren’t enabled

03 Independently audited controls, published policies

IN PLAIN TERMS

SOC 2 Type 2

An independent audit confirms security controls work over time.

ISO 27001

The global standard for managing information security.

RETENTION AND TRAINING

Governed by each company’s published policies. Read them at the source. Using another AI tool? Its own data policies apply.

04 What admins ask before turning it on

Does turning this on open all our Backstory data to Claude?

No. Claude only reaches what each signed-in user can see, one question at a time.

Can we control who has it?

Yes. Admins decide who it’s enabled for. People outside that group won’t see Backstory in Claude.

Can a manager see a rep’s questions?

Conversations belong to the person who had them. What a manager can see in Backstory itself doesn’t change.

Does Claude write back to Backstory or the CRM?

No. All 17 Backstory MCP tools only read. It can’t change anything in Backstory or your CRM.

05 Better prompts, *better answers*

Users never pick a tool. Claude does. Three patterns to know before rollout, each with a fix users can apply in the next prompt.

WHAT HAPPENS	FIX, AND WHAT TO TRY
Claude skips the tool It answers from general knowledge instead of your Backstory data. INSTEAD OF “How’s the deal going?” with no account named	Use the full company name. Add “Using Backstory” if there’s no tool call. “Catch me up on Halden Freight .”
Broad asks fall apart. “Summarize my whole pipeline” or stage words like “late-stage” get shallow or misread.	Stick to whose deals, close date and engagement. Then check how Backstory read it. “Which of my team’s deals closing this quarter have engagement under 50 ?”
A thin answer isn’t “nothing happened” Answers only include activity Backstory captured in the last 30 days. A short answer can mean activity is missing.	Ask what it’s based on. For anything older than 30 days, ask Backstory’s assistant. It reaches about three months back. “What dates and people is that based on?”

RULE OF THUMB

Name the account. Scope the ask. *Check the reading.*

“Using Backstory, who have we been talking to at Halden Freight in the last 30 days, and when?”
→ Based on the last 30 days of activity

FOR YOUR CHAMPION

01 Confirm who’s enabled for rollout

02 Share “The first 15 minutes” with those users

03 Send data questions back to this page
